*Department of Statistics  
Lund University  
Professor  
Krzysztof Podgórski*

### *Students*

STAN45

Data Mining and Visualization

*Lund University*

### **To STAN45 Students, Fall 2017,**

As the coordinator and main lecturer for the course:

#### *STAN45 Statistics: Data Mining and Visualization*

I would like to ask you for an evaluation of this course. It is very important for the Department of Statistics as well as for me to know your impression. Your voice will be taken seriously in consideration of future course offerings by the Department. It will also be used to adjust the format of the course to fit students needs in the best possible way. While you should feel free to express any opinion and sentiments, you may simply consider answer the following questions using three levels of answer: **Yes, Somewhat, No.**

- Do you consider the methods you have learnt useful and interesting for your education and/or future career?
- Did you find the discussed data mining methods appealing?
- Were the lecture notes containing the adequate material at the right level?
- Were the homework and computer assignments adequately reinforcing new methods?

- Was there enough help to lead you to proper solutions of homework assignments?
- Was the course work intensity at the right level?
- Was the grading fair?

General questions you can briefly elaborate below: What did you like the most about the course? What did you like the least about the course? What would you change? Feel free to use extra pages if needed.

**This evaluation is anonymous. Please, put your comments in my mailbox in the Statistics Department or sent using the university mail system (brown envelope that can be put in an arbitrary Lund university mailbox, multiple answer sheets in the same envelope are acceptable).**

**Hämställe Nr 10, Statistics, Krzysztof Podgorski**

With best regards

Krzysztof Podgórski
